SUBJECT INDEX

b = Book review; *L* = Letter to the Editor; *sc* = Short Communication

Acid leaching studies
  chrysotile asbestos 249–268
  neutron-irradiated chrysotile asbestos 269–279
Aerosols
  penetration of respirator and surgical mask filters 677–690
  personal inhalable, sampler performance, collaborative European study 135–153
Air contaminant concentrations following indoor spills of volatile liquids, development of model to predict 415–435
Air pollutants, evaluation of evaporation and concentration distribution models, test chamber study 625–641
Air, workplace, aromatic and chlorinated hydrocarbons, European sampling intercomparisons 527–554
Airborne microorganisms, exposure assessment by fluorescence microscopy and image processing 201–216
Airborne soluble platinum, platinum industry, measurement of short-term exposure 77–94
Airway symptoms, house painters, in relation to exposure to volatile organic compounds (VOCS), longitudinal study 155–166
Alpha-amylase allergens, wheat allergens and dust, inhalable, in bakeries, grouping strategies for exposure 287–296
Alumino-silicate ceramic fibre materials, de-vitrification, kinetics of formation of different crystalline phases 561–590
Amosite
  magic, menace, myth and malice 3–12, 383–386*L*, 387–388*L*
  Quebec chrysotile miners and millers, 1891–1920 birth cohort, development from 1904 and mortality to 1992 13–36
Amphiboles, magic, menace, myth and malice 3–12, 383–386*L*, 387–388*L*
Aromatic and chlorinated hydrocarbons in workplace air, European sampling intercomparisons 527–554
Asbestos
  chrysotile
    acid leaching studies 249–268
    neutron-irradiated, acid leaching studies 269–279
  magic, menace, myth and malice 3–12, 383–386*L*, 387–388*L*
  Quebec chrysotile miners and millers, 1891–1920 birth cohort, development from 1904 and mortality to 1992 13–36
Bacterial aerosols, three, collection by respirator and surgical mask filters under varying conditions of flow and relative humidity 677–690
Bakeries
  dust, wheat allergens and alpha-amylase allergens, inhalable, grouping strategies for exposure 287–296
  inhalable dust, exposure levels and determinants 609–624
Becquerel's legacy. A century of radioactivity. Proceedings of a Conference, London, 29 February and 1 March 1996 741–742*b*
Benzene, exposure over time, variability, prospective longitudinal study 485–500
Bioaerosol(s)
  exposure in waste collection 325–344
  penetration of respirator and surgical mask filters 677–690
Biological monitoring of occupational exposure, timing of sample collection 345–353
Breath, trace gas analysis using syringe injection technique, validation of SIFT technique 373–382
British Columbia, acid leaching studies of chrysotile asbestos 249–268

Calibrations, skin, accuracy and reproducibility using FIVES fluorescence monitor 313–324
California, acid leaching studies
  chrysotile asbestos 249–268
  neutron-irradiated chrysotile asbestos 269–279
Carcinogenicity, chrysotile and tremolite 699–705
Ceramic fibre materials, alumino-silicate, de-vitrification, kinetics of formation of different crystalline phases 561–590
Chemical agents, recognition and evaluation, modern industrial hygiene, volume 1 733–734*b*
Chlorinated and aromatic hydrocarbons in workplace air, European sampling intercomparisons 527–554
Chromium formation, ozone and ultra-violet emissions, in MIG welding, effects of welding parameters 95–104
Chrysotile asbestos
  acid leaching studies 249–268
  magic, menace, myth and malice 3–12, 383–386*L*, 387–388*L*
  neutron-irradiated, acid leaching studies 269–279

para-aramid and glass fibres, respirable, clearance from rat lungs, comparative study 217–233
tremolite and carcinogenicity 699–705
Chrysotile miners and millers, Quebec
1891–1920 birth cohort, development from 1904 and mortality to 1992 13–36
mesothelioma, epidemiology and aetiology 707–719
Coal fly ash
health hazards, compared to coal mine dust 659–676
see also Dust(s)
Cobalt, log-normality of distribution of occupational exposure concentrations 281–286
Computed tomography, spatial and temporal visualization of gases and vapours in air, numerical studies 105–122
Concentration distribution and evaporation models, evaluation, test chamber study 625–641
Crocidolite
magic, menace, myth and malice 3–12, 383–386[L], 387–388[L]
Quebec chrysotile miners and millers, 1891–1920 birth cohort, development from 1904 and mortality to 1992 13–36
Cuprinol, dermal exposure of amateur or non-occupational users to wood-preservative fluids applied by brushing outdoors 297–311
Cytotoxicity, man-made vitreous fibres, comparison 37–50

Dalrymple, Hugh, President of the BOHS 1996–1997 319
De-vitrification of alumino-silicate ceramic fibre materials, kinetics of formation of different crystalline phases 561–590
Dermal exposure
FIVES monitoring technique
accuracy and reproducibility of skin calibrations 313–324
amateur or non-occupational users, wood-preservative fluids applied by brushing outdoors 297–311
and risk assessment 729–731[L]
Diatomaceous earth industry, historical dust exposures, quantification 591–604
Diesel emissions, health effects 643–658
Dust(s)
exposure over time, variability, prospective longitudinal study 485–500
exposures, historical, in diatomaceous earth industry, quantification 591–604
hard metal, respirable, lung toxicity, rats 515–526
inhalable, bakeries, exposure levels and determinants 609–624
low toxicity occupational, exposure, assessment of human risks 123–133
wheat allergens and alpha-amylase allergens, inhalable, in bakeries, grouping strategies for exposure 287–296
see also Coal fly ash

Earth industry, diatomaceous, historical dust exposures, quantification 591–604
Editor's note, iii (frontispiece of No.4)
Electrolytic nickel refining, exposure to soluble nickel 167–188
Electrolytic plating, occupational exposure to nickel salts 189–200
Enzymatic tissue digestion method for fibre biopersistence studies 721–727[sc]
Ethanol, hairdressing salons, monitoring and modelling of exposure 235–247
Evaporation and concentration distribution models, evaluation, test chamber study 625–641
Exposure *see* Occupational exposure

Fibre biopersistence studies, enzymatic tissue digestion method 721–727[sc]
Fibre materials, ceramic, alumino-silicate, de-vitrification, kinetics of formation of different crystalline phases 561–590
Fibre release from insulation products, testing, report on workshop 605–607[sc]
FIVES fluorescence monitor, accuracy and reproducibility of skin calibrations 313–324
FIVES fluorescence monitoring technique, for dermal exposure of wood-preservative fluids 297–311
Fluorescence microscopy and image processing, for exposure assessment of airborne microorganisms 201–216

Gas, trace, analysis of breath using syringe injection technique, validation of SIFT technique 373–382
Gases and vapours in air, spatial and temporal visualization using CT, numerical studies 105–122
Glass, chrysotile and para-aramid fibres, respirable, clearance from rat lungs, comparative study 217–233
Glutaraldehyde solutions, spilled, in a hospital setting, estimation of exposure 691–698
Gypsum board, production of volatile metabolites from *Streptomyces albidoflavus* cultivated on 393–413

Hairdressing salons, monitoring and modelling of exposure to ethanol 235–247
Hard metal dusts, respirable, lung toxicity, rats 515–526
Hazardous substances, control, manager's guide 501[b]
Hearing impairment, risk, and noise exposure, comprehensive strategy for assessment 467–484
Hospital setting, spilled glutaraldehyde solutions, estimation of exposure 691–698
House painters, airway symptoms, in relation to exposure to volatile organic compounds (VOCS), longitudinal study 155–166
Hydrocarbons, aromatic and chlorinated, in workplace air, European sampling intercomparisons 527–554

Image processing and fluorescence microscopy, for exposure assessment of airborne microorganisms 201–216
Industrial hygiene, modern, volume 1, recognition and evaluation of chemical agents 733–734[b]
Insulation products, fibre release, testing, report on workshop 605–607[sc]
Inverse Gaussian distribution, application to occupational exposure data 505–514

Lead, exposure over time, variability, prospective longitudinal study 485–500
Log-normality of distribution of occupational exposure concentrations to cobalt 281–286
Lognormal distribution-based exposure assessment method for unbalanced data 63–76
Low toxicity occupational dusts, exposure, assessment of human risks 123–133
Lung cancer, magic, menace, myth and malice 3–12, 383–386[L], 387–388[L]
Lung toxicity of respirable hard metal dusts in rats 515–526
Lungs, rat, clearance of respirable para-aramid, chrysotile and glass fibres, comparative study 217–233

Magic, menace, myth and malice 3–12, 383–386[L], 387–388[L]
Magnetic stimulation, advances 740–741[b]
Man-made vitreous fibres, cytotoxicity, comparison 37–50
Mesothelioma
  magic, menace, myth and malice 3–12, 383–386[L], 387–388[L]
  Quebec chrysotile miners and millers 1891–1920 birth cohort, development from 1904 and mortality to 1992 13–36
  epidemiology and aetiology 707–719
Metal dusts, hard, respirable, lung toxicity, rats 515–526
Microorganisms, airborne, exposure assessment by fluorescence microscopy and image processing 201–216
MIG welding, effects of welding parameters on ultra-violet emissions, ozone and Cr^{VI} formation 95–104
Millers, chrysotile, Quebec, mesothelioma, epidemiology and aetiology 707–719
  see also Chrysotile
Miners and millers, chrysotile, Quebec, mesothelioma, epidemiology and aetiology 707–719
  see also Chrysotile
Multiple work shifts, exposures to refractory ceramic fibres, comparison 555–560

Nickel, soluble, exposure in electrolytic nickel refining 167–188
Nickel salts in electrolytic plating, occupational exposure 189–200
Noise exposure and risk of hearing impairment, comprehensive strategy for assessment 467–484
Noise and toxic substances, effects of combined exposure, critical review of literature 455–465
Non-ionizing radiation. Proceedings, Third International Non-Ionizing Radiation Workshop, Baden, Austria, 1996 739–740[b]
Nose-only rodent inhalation facility, high containment, construction and validation 51–61

Occupational exposure
  airborne microorganisms, assessment by fluorescence microscopy and image processing 201–216
  assessment, spatial and temporal visualization of gases and vapours in air using CT, numerical studies 105–122
  biological monitoring, timing of sample collection 345–353
  cobalt, log-normality of distribution of exposure concentrations 281–286
  data, application of inverse Gaussian distribution to 505–514
  from spilled glutaraldehyde solutions in a hospital setting, estimation 691–698
  inhalable dust, bakeries, exposure levels and determinants 609–624
  low toxicity occupational dusts, assessment of human risks 123–133
  nickel salts in electrolytic plating 189–200
  over time, variability, prospective longitudinal study 485–500
  refractory ceramic fibres, over multiple work shifts, comparison 555–560
  soluble nickel in electrolytic nickel refining 167–188
  volatile organic compounds (VOCS), house painters, airway symptoms, longitudinal study 155–166
Occupational hygiene, 2nd edition 501–503[b]
Ozone, ultra-violet emissions and Cr^{VI} formation, in MIG welding, effects of welding parameters 95–104

Painters, house, airway symptoms, in relation to exposure to volatile organic compounds (VOCS), longitudinal study 155–166
Para-aramid, chrysotile and glass fibres, respirable, clearance from rat lungs, comparative study 217–233
Permaguard, dermal exposure of amateur or non-occupational users to wood-preservative fluids applied by brushing outdoors 297–311
Personal inhalable aerosol sampler performance, collaborative European study 135–153
Plating, electrolytic, occupational exposure to nickel salts 189–200
Platinum industry, airborne soluble platinum, measurement of short-term exposure 77–94

Pneumoconiosis, Quebec chrysotile miners and millers, 1891–1920 birth cohort, development from 1904 and mortality to 1992 13–36
President of the BOHS 1996–1997, Hugh Dalrymple 319

Quebec
  acid leaching studies
    chrysotile asbestos 249–268
    neutron-irradiated chrysotile asbestos 269–279
  asbestos cohort 1
Quebec chrysotile miners and millers
  1891–1920 birth cohort, development from 1904 and mortality to 1992 13–36
  mesothelioma, epidemiology and aetiology 707–719

Radiation, non-ionizing. Proceedings, Third International Non-Ionizing Radiation Workshop, Baden, Austria, 1996 739–740[b]
Radioactive substances, inhaled, deposition, retention and dosimetry, NCRP Report No. 125 734–739[b]
Radioactivity, Becquerel's legacy. A century of radioactivity. Proceedings of a Conference, London, 29 February and 1 March 1996 741–742[b]
Refractory ceramic fibres, exposures over multiple work shifts, comparison 555–560
Respirable para-aramid, chrysotile and glass fibres, clearance from rat lungs, comparative study 217–233
Respirator filters, collection of three bacterial aerosols under varying conditions of flow and relative humidity 677–690
Risk assessment, dermal exposure 729–731[L]
Risks, human, from exposure to low toxicity occupational dusts, assessment 123–133
Rodent inhalation facility, nose-only, high containment, construction and validation 51–61

Sample collection for biological monitoring of occupational exposure, timing 345–353
SIFT technique for trace gas analysis of breath using syringe injection technique, validation 373–382
Streptomyces albidoflavus, cultivated on gypsum board and tryptone glucose extract agar, production of volatile metabolites, influence of temperature, oxygen and carbon dioxide levels 393–413
Surgical mask filters, collection of three bacterial aerosols under varying conditions of flow and relative humidity 677–690
Syringe injection technique, for trace gas analysis of breath, validation of SIFT technique 373–382

Timing of sample collection for biological monitoring of occupational exposure 345–353
Toxic substances and noise, effects of combined exposure, critical review of literature 455–465
Trace gas analysis of breath using syringe injection technique, validation of SIFT technique 373–382
Tremolite, chrysotile, and carcinogenicity 699–705
Tryptone glucose extract agar, production of volatile metabolites from *Streptomyces albidoflavus* cultivated on 393–413

Ultra-violet emissions, ozone and Cr^{VI} formation, in MIG welding, effects of welding parameters 95–104
Unbalanced date, lognormal distribution-based exposure assessment method 63–76

Vapours and gases in air, spatial and temporal visualization using CT, numerical studies 105–122
Visualization, spatial and temporal, of gases and vapours in air, using CT, numerical studies 105–122
Volatile liquids, air contaminant concentrations following indoor spills, development of model to predict 415–435
Volatile metabolites, production from *Streptomyces albidoflavus*, cultivated on gypsum board and tryptone glucose extract agar, influence of temperature, oxygen and carbon dioxide levels 393–413
Volatile organic compounds (VOCS), airway symptoms, house painters, in relation to exposure, longitudinal study 155–166
Volatilisation processes in wastewater treatment plants as source of potential exposure to VOCs 437–454

Waste collection, bioaerosol exposure 325–344
Wastewater treatment plants, volatilisation processes as source of potential exposure to VOCs 437–454
Welding fume, new sampler, development and testing 355–372
Welding parameters, effects on ultra-violet emissions, ozone and Cr^{VI} formation in MIG welding 95–104
Wheat allergens, alpha-amylase allergens and dust, inhalable, in bakeries, grouping strategies for exposure 287–296
Wood-preservative fluids applied by brushing outdoors, dermal exposure of amateur or non-occupational users, FIVES monitoring technique 297–311
Work shifts, multiple, exposures to refractory ceramic fibres, comparison 555–560
Workplace air, aromatic and chlorinated hydrocarbons, European sampling intercomparisons 527–554
